

## On the Subject of Plug-Ins

*When all else fails, just jam the plug into the socket. Works every time.*

This module shows a duplex receptacle with two oddly-shaped outlets with a green button in the bottom middle.

When the green button is pressed, five buttons with labels will appear on the module.

The labels are the names of different devices. The green button as well as the duplex receptacle will disappear.

Select the device that can fit into either of the receptacles to solve the module.

If an incorrect device is chosen or 3 seconds passed since pressing the green button, a strike will be issued, the module will reset and a new duplex receptacle will be shown.

A total of 3 stages are necessary to disarm this module.

The following page lists all possible devices and their corresponding plug-in.

				
Bedside lamp	Waffle iron	Washing machine	Window fan	Blender
				
Vacuum cleaner	Desk fan	DVD player	Franks 2000 inch TV	Hairdryer
				
Iron	Laptop charger	Microwave	Sewing machine	Solar water heater
				
Telephone	Toaster	Nightlight	Paper shredder	Printer
				
Radiator	Refrigerator	Air conditioner	Stereo system	VHC recorder
